What are Engraved Surface Designs?

The creation of designs for logos, way finding signs, realistic image reproductions and pure decorative designs within **a choice of two decorative surfacing product ranges** from Blackheath Products.

How we create your design

We can work with you by using our CAD, 2D AND 3D technology to apply your designs to your selected materials using an engraving process.

There are **no limits to the scope of designs** we can develop.

All we need from you is an image of the design you would like us to create in a digital format. We will then agree with you the final detailed design and get to work!

You can also choose from our library of designs, which we have already used in numerous projects (*see pages 7-10*).

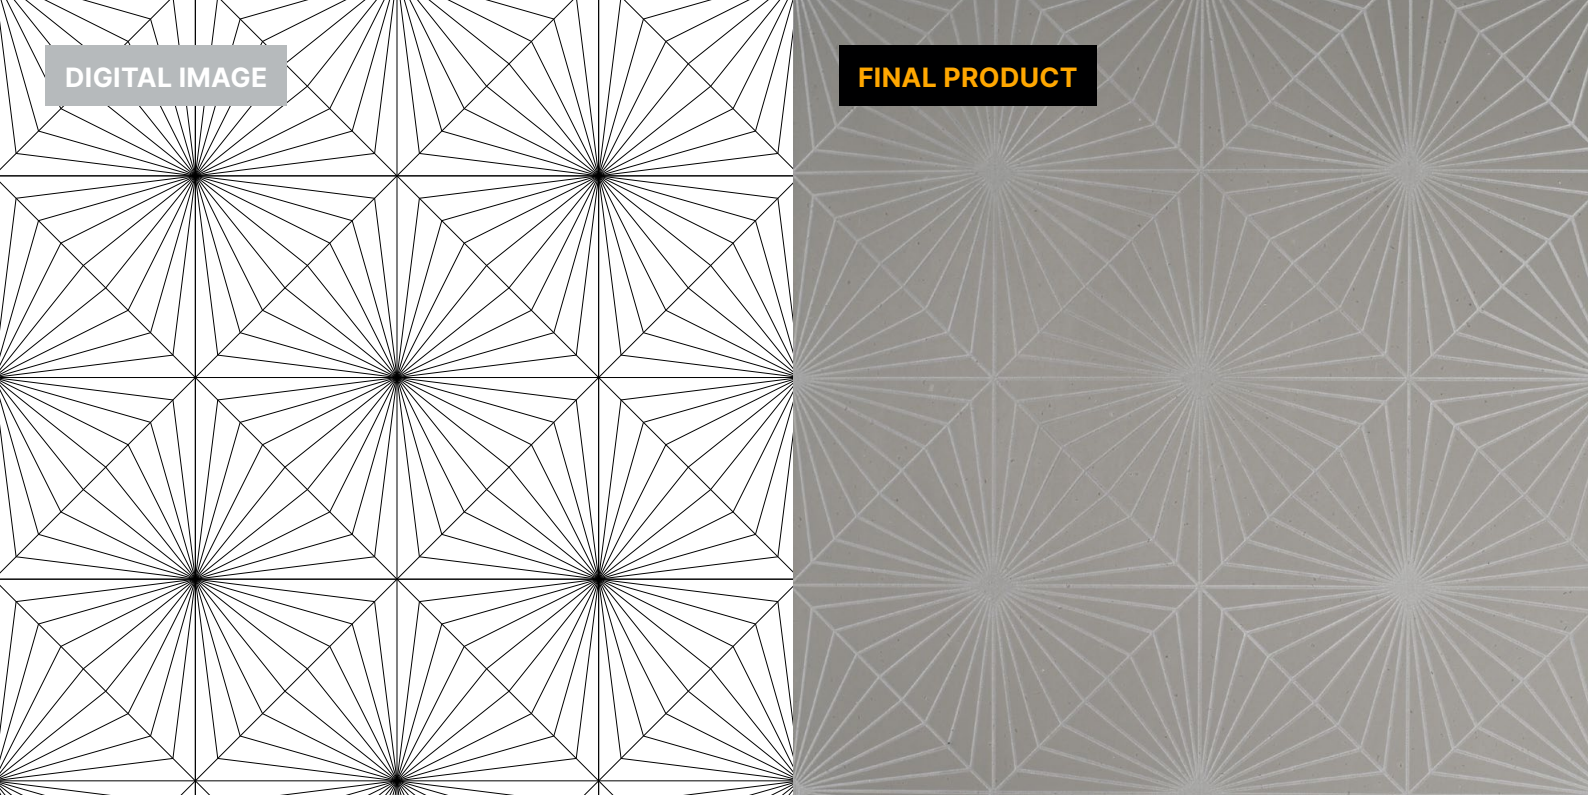

The engraving process

We use the latest laser technology, mechanical processes (including CNC saw and router cutters, waterjet and sandblasting machines) and **artisan hand crafted techniques** to engrave your design to whatever depth you require within your selected material.

Endless applications

Engraved surface designs can be used in **all interior projects**. From hospital wayfinding signs to corporate logos displayed in reception areas.

Or pure decorative designs to cheer up a school assembly hall or realistic images, perhaps of the latest film stars to feature in a cinema refurbishment project.

The engraved surface design materials

Staron 12mm solid surfacing

PERFECT FOR ENGRAVING

Because the colours of Staron homogeneously appear throughout its thickness, it is a perfect material for seamlessly engraved designs.

SAFE MATERIAL

Staron is a chemically inert, safe material. Because of this, it is the perfect surface to be used in high traffic environments.

100% WATERPROOF

Because Staron is non-porous it does not absorb bacteria and is very easy to keep clean and completely hygienic.

SEAMLESS DESIGN

The open joints of most surfacing materials are eliminated by Staron's remarkable ability to be seamlessly jointed.

DURABILITY

The whole life cost of Staron is admirably low because of its structural strength. And, in the unlikely event it is damaged, unlike most other surfacing materials, it can be repaired to look as good as new again.

Formica 12mm thickness compact grade laminate

PERFECT FOR ENGRAVING

The core colour of Formica compact grade laminate is black. This can be used as a stark or more subtle contrast with the range of decorative surface colours on one or both sides, to highlight the engraved surface design.

SAFE MATERIAL

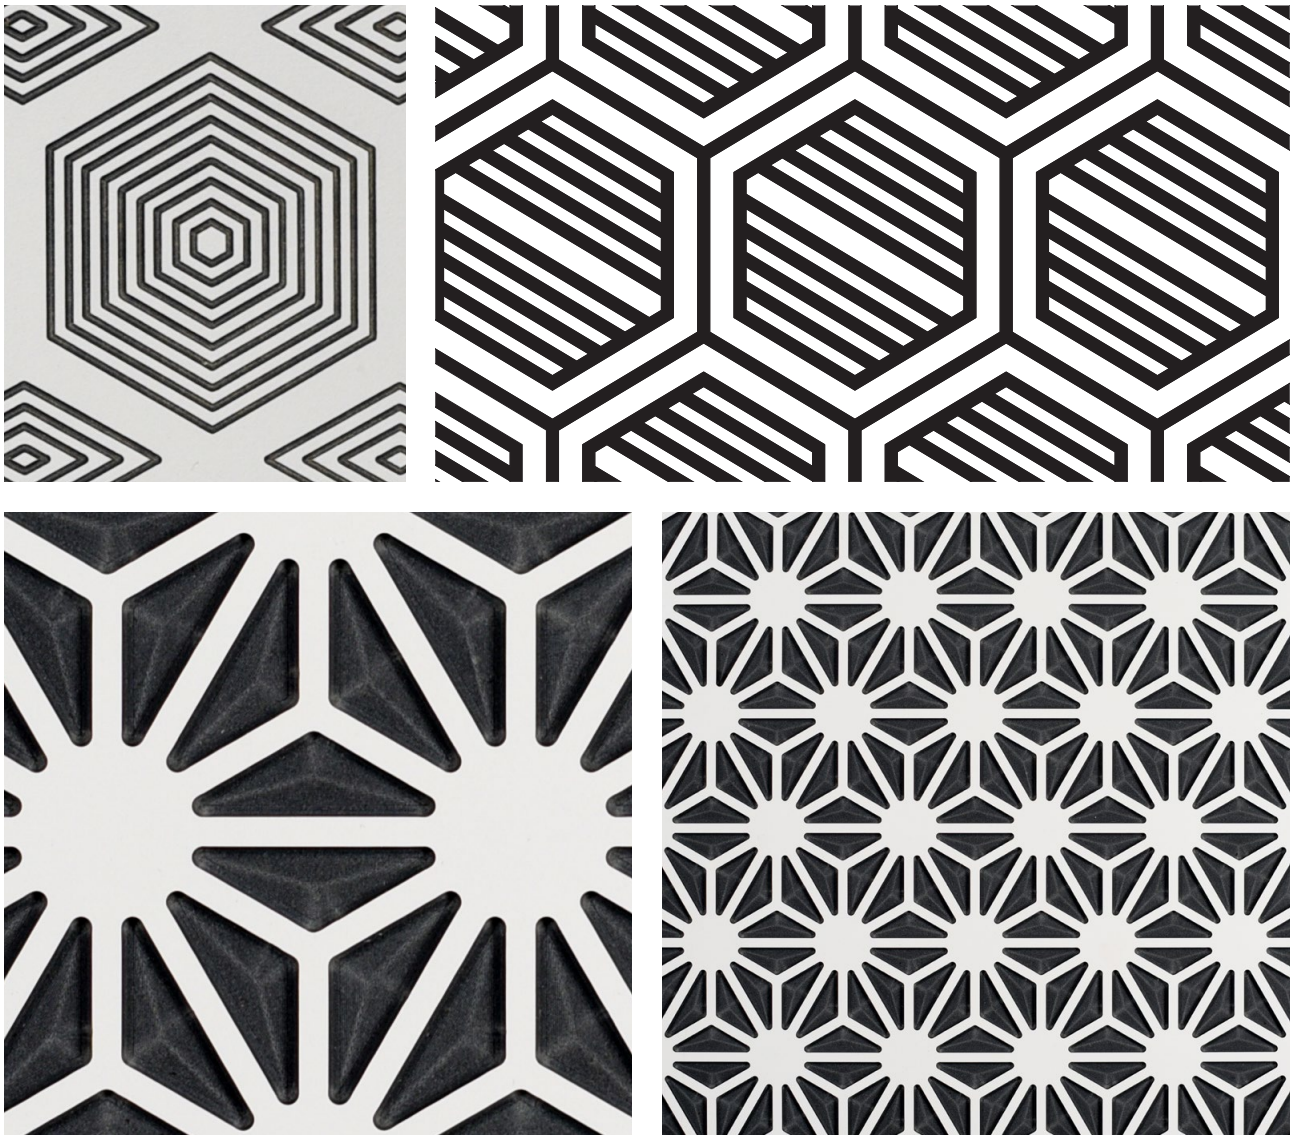

Formica compact grade laminate is a safe material, which is often used within busy public environments, such as washrooms and changing rooms.

NON POROUS AND HYGIENIC

Formica compact grade laminate has a very high level of water resistance, so it does not absorb bacteria and is very easy to keep clean and hygienic.

COST EFFECTIVE AND DURABLE

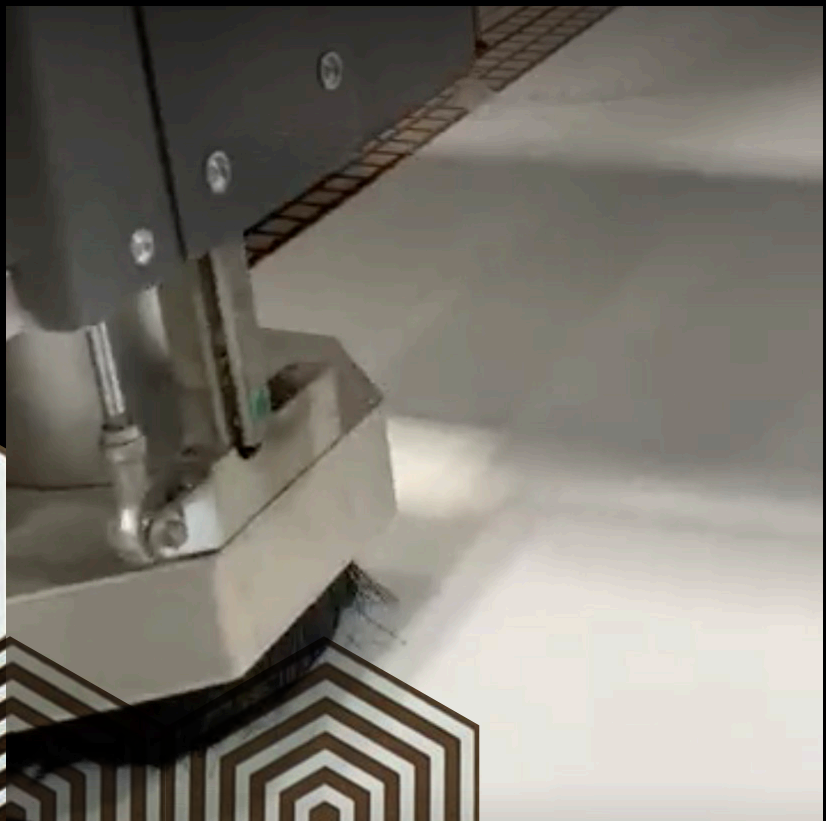

Formica compact grade laminate is a self-supporting material with a high impact resistance. It is also a very cost-effective surface.

Engraved surface designs can be used in **all interior projects**.

From hospital wayfinding signs to corporate logos, engraved surface designs doesn't stop there! Why not opt for a realistic reproduction within an educational setting, or create an eye-catching display using pure decoration in a hotel foyer.

Take a look at some of our ideas that have been brought to reality.
